D is correct.
Agility: The ability to react quickly. Cloud services can allocate and deallocate resources quickly. They are provided on-demand via self-service, so vast amounts of computing resources can be provisioned in minutes. There is no manual

intervention in provisioning or deprovisioning services.

Selected Answer: D

Adapting quickly to changing requirements, cloud services offer several key features that enhance agility and flexibility

upvoted 1 times

6bac29e 3 months, 3 weeks ago

The key seems to be the word "Cloud Services" rather than "Business Services" to react quickly. If it says business services then it would be agility, but since they are talking about Cloud services it is referring to Manageability

It's D
the concept of adapting quickly to changing requirements aligns more closely with cloud agility.

0dfea6b 4 months, 2 weeks ago

It says what enables it to do that. Manageability in the cloud enables organizations to manage their resources more efficiently, reducing the time and effort required to manage and maintain their IT environment.

The ability of a cloud service to adapt quickly to changing requirements is primarily enabled by its agility and scalability.

Agility refers to the ability of a cloud service to respond quickly and efficiently to changes
