EXAM AZ-900 TOPIC 1 QUESTION 131 DISCUSSION

Actual exam question from Microsoft's AZ-900
Question #: 131
Topic #: 1
[All AZ-900 Questions]

You plan to deploy several Azure virtual machines.
You need to ensure that the services running on the virtual machines remain available if a single data center fails.
What are two possible solutions? Each correct answer presents a complete solution.

A. Deploy the virtual machines to two or more availability zones.

B. Deploy the virtual machines to two or more resource groups.

C. Deploy the virtual machines to a scale set.

D. Deploy the virtual machines to two or more regions.

This was on exam. 9/30/23

upvoted 1 times

SAFM 1 year ago

Selected Answer: A

The key is the "single datacenter" which indicates the proposal of the AZs = same region. If the requirement were to protect against "regional failure" then it should be D.

Deploying VM's in two or more Regions is the same as deploying in two or more Availability Zones. A & D.

upvoted 1 times

[Removed] 1 year, 8 months ago

This is not correct. There can be multiple Availability Zones in one Region.

Although, they're both providing a solution for the stated problem.
