"configuring the SaaS solution" - When implementing a SaaS solution, the provider of the SaaS solution is responsible for configuring high availability and defining scalability rules. The customer is responsible for configuring and using the SaaS solution, but not for installing it.

Configuring SaaS solution is correct answer as you do not have to do anything else and just have to take care of configuration part.

emptyH 1 year, 8 months ago

Configuring the SaaS solution. Everything else is not controlled by you. You must only configure the Software being provided as a service to work or your needs.

Hotspot, as far as I know, is a visual multiple choice question. You can identify one or more answers on a image, table or anything else.
