the key to #3 is "up to". "up to" creates a limit of 2TB, but the actual limit is 5PB
upvoted 20 times

mateo2121 3 years, 7 months ago
The key word is "up to", so the limit is wrong and answer should be NO

I'm having a tuff time understanding if statement 1 is true why is statement 2 false?
By default, all data stored in an Azure Storage account is automatically replicated and backed up to another Azure data center within the same region to ensure high availability and durability of your data.

Thank you

By default, locally-redundant storage (LRS) is selected, which replicates your data three times within the same data center. you have the option to choose geo-redundant storage (GRS) or read-access geo-redundant storage (RA-GRS), which replicates your data to another data center in a different region for additional protection against regional disasters or outages.
