EXAM AZ-900 TOPIC 1 QUESTION 49 DISCUSSION

Actual exam question from Microsoft's AZ-900

Question #: 49

Topic #: 1

[\[All AZ-900 Questions\]](#)

You plan to migrate several servers from an on-premises network to Azure.

What is an advantage of using a public cloud service for the servers over an on-premises network?

- A. The public cloud is owned by the public, NOT a private corporation
- B. The public cloud is a crowd-sourcing solution that provides corporations with the ability to enhance the cloud
- C. All public cloud resources can be freely accessed by every member of the public
- D. The public cloud is a shared entity whereby multiple corporations each use a portion of the resources in the cloud

D. The advantage of using a public cloud service for the servers over an on-premises network is that the public cloud is a shared entity whereby multiple corporations each use a portion of the resources in the cloud. This means that the cost of the resources is shared among multiple organizations, allowing for cost savings and scalability as needed. Additionally, the public cloud provides a high level of availability and redundancy, with built-in features for disaster recovery and backup.

D, the public cloud is a shared entity whereby multiple corporations each use a portion of the resources in the cloud, is the only acceptable answer between all options here.
