EXAM AZ-900 TOPIC 1 QUESTION 244 DISCUSSION

Actual exam question from Microsoft's AZ-900

Question #: 244

Topic #: 1

[\[All AZ-900 Questions\]](#)

Your company plans to automate the deployment of servers to Azure.

Your manager is concerned that you may expose administrative credentials during the deployment.

You need to recommend an Azure solution that encrypts the administrative credentials during the deployment.

What should you include in the recommendation?

- A. Azure Key Vault
- B. Azure Information Protection
- C. Microsoft Defender for Cloud
- D. Azure Multi-Factor Authentication (MFA)

The key word here is 'concerned'. When storing credentials, Key Vault is the go-to choice.

Selected Answer: A

A is the answer.

<https://learn.microsoft.com/en-us/azure/key-vault/general/overview>

Azure Key Vault is one of several key management solutions in Azure, and helps solve the following problems:

- Secrets Management - Azure Key Vault can be used to Securely store and tightly control access to tokens, passwords, certificates, API keys, and other secrets.

Azure Key Vault is a service that allows you to securely store and manage sensitive information such as keys, passwords, and certificates. It allows you to encrypt administrative credentials during the deployment and also grant selective access to these credentials to users or applications.

It also provides an extra layer of security by allowing you to implement Azure AD based authentication and RBAC authorization mechanisms.
