Its NYY

Customer Responsibilities:

Application Code: The customer is responsible for developing, deploying, and maintaining the application code that runs on the Azure Web App. This includes writing and updating the code, testing it for compatibility and functionality, and deploying it to the Azure Web App.

Configuration Management: The customer configures settings and parameters for the Azure Web App, such as scaling settings, custom domain names, SSL certificates, and application settings.

Data Management: The customer manages the data used by the application, including databases, storage accounts, and other data sources. This includes data backups, replication, and compliance with data protection regulations.

Performance Optimization: The customer monitors and optimizes the performance of the application running on the Azure Web App, including performance tuning, troubleshooting, and scaling based on demand.
