answer is correct and more explanation for answer 1:

There are several ways to install PowerShell on macOS. Choose one of the following methods:

Install using Homebrew. Homebrew is the preferred package manager for macOS.

Install PowerShell via Direct Download

Install from binary archives.

If the brew command isn't found, you need to install Homebrew following their instructions.

Bash

Copy

```
/bin/bash -c "$(curl -fsSL https://raw.githubusercontent.com/Homebrew/install/HEAD/install.sh)"
```

Now, you can install PowerShell:

sh

Copy

```
brew install --cask powershell
```

Finally, verify that your install is working properly:

sh

Copy

```
pwsh
```

When new versions of PowerShell are released, update Homebrew's formulae and upgrade PowerShell:

sh

Copy

```
brew update
```

```
brew upgrade powershell --cask
```

How upgrade powershell task

This is a horrible trick question for the third answer. All windows devices by default have a browser so therefore can access Azure Portal. But on a technicality the answer is a no? Microsoft really do not know how to word their questions!

   upvoted 3 times

  **semauni** 1 year, 5 months ago

The question is actually really straightforward, but a lot of people are missing words like 'only' and 'not'. So I wouldn't say it's a matter of trickery, it's a matter of reading comprehension

Azure PowerShell modules can be installed on MacOS >> The Azure PowerShell Service Management module only works with Windows PowerShell. It is not cross-platform and does not run on Linux or macOS

Azure Cloud Shell can be accessed from a web browser on a Linux computer >> Answer is Yes. Azure PowerShell is available for Windows, Linux, and Mac, Chrome OS and can be accessed in a web browser via the Cloud Shell

The Azure portal can only be accessed from windows >>

The Azure portal is a web-based console and runs in the browser of all modern desktops and tablet devices. To use the portal, you must have JavaScript enabled on your browser
