I assume that when they say 'deploy', they mean actually racking a server yourself. You don't do this with Azure dedicated hosts so the answer is A.

I think this is not only about Azure, just a general question.

Deyvessh 3 years, 4 months ago

I think your are right, Its means you actually building a server yourself

upvoted 1 times

maltezie 3 years, 4 months ago

Well, it says "physical servers", so this should be easy points in the exam

We deploy only in private data centers. It comes under private cloud model and hybrid cloud models. So, the correct answer is A

Given answer is correct, but:

"A private cloud is on-premises so you can deploy physical servers."

NOT true - a private cloud doesn't have to mean on-premise. It can mean owned by a single organization.

public cloud is offered by Azure its there cloud so you can not deploy your server there. Hence private and hybrid.

I am wondering, [Private CLOUD = on-premise] ?

Private cloud is one of the cloud services,

so how Private CLOUD can be equal on-premise?

I heard that CLOUD is OFF-premise (opposite on-premise)

Just let me know.

Yep you are correct .If we use the correct wording all the answers are wrong .So then because we understand what they were trying to say , therefore the correct answer would be A.

Private cloud mean you build your own cloud infrastructure in your own datacenter/office/home/server room. You will need servers, storage, network appliances etc, and you will build this infra in your own premise. and of course you need to maintain all those hardware by yourself. So that's why we consider private cloud as on-prem. Hope I answer your question.

I think private cloud can be either on-premises or off-premises.

on-premises - you host the private cloud yourself onsite.

off-premises - the cloud servers are not physically located on the grounds of the organization using them. Instead, a third party manages and hosts the cloud remotely

Selected Answer: A

Correct, if you are thinking, what about Azure Dedicated Host? i will tell you ADH is an example of private cloud, so most of Azure is public cloud however ADH is not.

  **nav777** 2 years, 9 months ago

Keyword here is "deploy physical servers?" You can deploy physical servers only in Private and Hybrid Cloud. So the Answer is A.

   upvoted 5 times

  **Dennis_HK** 2 years, 10 months ago

tricky question, nowaway many public cloud vendors also offer physical servers as well

   upvoted 1 times

  **phungus** 2 years, 11 months ago

I hate the inclusion of "only" in option A. It's poorly written. You can't have two things and still say "only" because that implies one thing. It should be "Both private and hybrid cloud".

   upvoted 2 times

  **examsucks** 2 years, 10 months ago

I know we are technical people but this is common grammar, only doesn't mean one thing, it is ONLY those two options out of the three

   upvoted 2 times

  **Mcgood** 3 years, 1 month ago

This doesn't make sense at all they are saying cloud and hybrid but the key infrastrure is hybrid, if I say hybrid only will i be wrong?
