EXAM AZ-900 TOPIC 1 QUESTION 30 DISCUSSION

Actual exam question from Microsoft's AZ-900

Question #: 30

Topic #: 1

[\[All AZ-900 Questions\]](#)

Note: The question is included in a number of questions that depicts the identical set-up. However, every question has a distinctive result. Establish if the solution satisfies the requirements.

Your company has an Azure Active Directory (Azure AD) environment. Users occasionally connect to Azure AD via the Internet. You have been tasked with making sure that users who connect to Azure AD via the internet from an unidentified IP address, are automatically encouraged to change passwords.

Solution: You configure the use of Azure AD Privileged Identity Management.

Does the solution meet the goal?

A. Yes

B. No

Privileged Identity Management provides time-based and approval-based role activation to mitigate the risks of excessive, unnecessary, or misused access permissions on resources that you care about. Here are some of the key features of Privileged Identity Management:

- Provide just-in-time privileged access to Azure AD and Azure resources
- Assign time-bound access to resources using start and end dates
- Require approval to activate privileged roles
- Enforce multi-factor authentication to activate any role
- Use justification to understand why users activate
- Get notifications when privileged roles are activated
- Conduct access reviews to ensure users still need roles
- Download audit history for internal or external audit
- Prevents removal of the last active Global Administrator role assignment

The answer is B. APIM is not used to force to change password if logged from unknown IP. It is Conditional Access that can be used to force pwd change.

Selected Answer: B

To address the goal of automatically encouraging users to change passwords when connecting to Azure AD from an unidentified IP address, you can leverage Azure AD Conditional Access policies. Azure AD Conditional Access allows you to define access control policies based on various conditions, including the user's location or network location.

Selected Answer: B

the answer is NO it's only the AIP

   upvoted 3 times

  **Kanders** 1 year, 8 months ago

B. No - PIM is not necessary in this scenario. The Azure Identity Protection will suffice.

Selected Answer: B

B. <https://docs.microsoft.com/en-us/azure/active-directory/identity-protection/howto-sign-in-risk-policy>
Identity Protection detects risks of many types, including:

- Anonymous IP address use
- Atypical travel
- Malware linked IP address
- Unfamiliar sign-in properties
- Leaked credentials
- Password spray
- and more...

Answer is No

Privileged Identity Management (PIM) is a service in Azure Active Directory (Azure AD) that enables you to manage, control, and monitor access to important resources in your organization. These resources include resources in Azure AD, Azure, and other Microsoft Online Services such as Microsoft 365 or Microsoft Intune.
