"View the Azure Activity log and send it to Azure Monitor Logs, Azure Event Hubs, and Azure Storage."

   upvoted 1 times

  **Yomzie** 7 months, 1 week ago

While Azure Activity Log is focused on logging and tracking operations and changes within Azure resources for auditing and monitoring purposes, Azure Event Hub is geared towards ingesting, processing, and managing large volumes of streaming event data from various sources for real-time analytics and processing. Event Hub is typically used as a source for SIEM solution to provide the data for analysis.

Answer: Azure Activity Log. You would use the Azure Activity Log, not Azure Monitor to view which user turned off a specific virtual machine during the last 14 days. Activity logs are kept for 90 days. You can query for any range of dates, as long as the starting date isn't more than 90 days in the past.
