'A. APIs' is correct.

Key is Desktop Applications which need to interact with Azure resources in a programmatic way, so APIs.

The question is really not worded well. You can potentially use majority of the answers but generally you should use API's on 443 ideally.

I don't really understand the question. I had guessed Cloud Shell myself, but I suppose I'll go for A too and maybe not win the point on this one.
