"Azure AD" is the answer.

<https://learn.microsoft.com/en-us/training/modules/describe-azure-identity-access-security/2-directory-services>

Azure AD provides services such as:

- Single sign-on: Single sign-on (SSO) enables you to remember only one username and one password to access multiple applications. A single identity is tied to a user, which simplifies the security model. As users change roles or leave an organization, access modifications are tied to that identity, which greatly reduces the effort needed to change or disable accounts.
