Predictability

Predictability in the cloud lets you move forward with confidence. Predictability can be focused on performance predictability or cost predictability. Both performance and cost predictability are heavily influenced by the Microsoft Azure Well-Architected Framework. Deploy a solution that's built around this framework and you have a solution that's cost and performance are predictable.

Predictability – whether of performance or capacity – is a by-product of many factors, including the application architecture, the network architecture, the location and type of device from which a user accesses that application
