The correct answer is A. An Azure region contains one or more data centers that are connected by using a low-latency network.

Option B is incorrect because Azure regions are not found in each country where Microsoft has a subsidiary office.

Option C is incorrect because Azure regions can be found in many countries outside of Europe and the Americas.

Option D is incorrect because Azure regions are connected by using a low-latency network.

Literally... Each Azure Region contains no less than 3 DCs.

"To ensure resiliency, a minimum of three separate availability zones are present in all availability zone-enabled regions."

"Each zone is composed of one or more datacenters equipped with independent power, cooling, and networking infrastructure."

🗄️ 👤 **DJP_007** 1 year, 1 month ago

where did you get this information from :> that each Region has more than 3 DC's? - you misread that entirely -- that has nothing to do with DC's but to do with Availabilty zones. and - NOT ALL regions have availability zones.

👍 ↩️ 🚩 upvoted 1 times

🗄️ 👤 **Irodriguez** 1 year, 4 months ago

Remember that not all of the Azure Regions have Availability Zones ... in your sentence you say " ... in all availability ZONE-ENABLED regions" (that only apply for Zone Enabled regions, not for all regions)
