First one is tricky - The word Azure makes the big difference here.

Ideally Azure status informs you of service outages in Azure on the Azure Status page. The page is a global view of the health of all Azure services across all Azure regions. As, the Azure Status is part of the Azure Service Health this can answer is YES.

However, if question mentioned just 'Service Health' then it would be wrong as Service Health the provides a personalized view of the health of the Azure services and regions you're using.

Azure Service Health => Azure Status + Service Health + Resource health

Take a look at this video, minute 20.

https://www.youtube.com/watch?v=tQp1YkB2Tgs&list=PLIVtbbG169nED0_vMEniWBQjSoxTsBYS3&index=64

It shows that Azure environments are:

- 1/ Commercial --> the one we know as Azure public Cloud
- 2/ US GOV
- 3/China
- 4/ Germany (but not anymore invested in).

What if we know that maintenance work affects our services? This is valuable information, and knows that we can do some steps to prevent crashing services of VMs?
