NYN is the answer.

<https://learn.microsoft.com/en-us/azure/active-directory/enterprise-users/licensing-groups-resolve-problems#more-than-one-product-license-assigned-to-a-group>

You can assign more than one product license to a group. For example, you can assign Office 365 Enterprise E3 and Enterprise Mobility + Security to a group to easily enable all included services for users.

Azure AD attempts to assign all licenses that are specified in the group to each user. If Azure AD can't assign one of the products because of business logic problems, it won't assign the other licenses in the group either. An example is if there aren't enough licenses for all, or if there are conflicts with other services that are enabled on the user.

You can see the users who failed to get assigned and check which products are affected by this problem.

Answer: No Yes No

   upvoted 2 times

  **raul4real73** 2 years, 4 months ago

2 is NO.

Azure AD helps users access both external and internal resources.

External resources might include Microsoft Office 365, the Azure portal, and thousands of other software as a service (SaaS) applications.

Internal resources might include apps on your corporate network and intranet, along with any cloud applications developed within your organization.

Your comment is exactly the response for YES.

If it is used for internal and external then it means correct. Microsoft 365 is external.
