I think first answer is YES: <https://docs.microsoft.com/en-us/azure/azure-monitor/overview>

I think second answer is NO. Azure Monitor cannot send alerts (email) to Azure AD security group but only to Azure AD user: <https://docs.microsoft.com/en-us/azure/azure-monitor/platform/action-groups>.

I think last answer is YES: <https://docs.microsoft.com/en-us/azure/azure-monitor/platform/alerts-overview>

  **Harry28731** 2 years, 10 months ago

To Add more weight Second answer is NO.

A security group can have users, devices, groups and service principals as its members and users and service principals as its owners

<https://docs.microsoft.com/en-us/azure/azure-monitor/alerts/action-groups>

. Notification type: Select the type of notification you want to send. The available options are:

Email Azure Resource Manager Role - Send an email to users assigned to certain subscription-level ARM roles.

Email/SMS/Push/Voice - Send these notification types to specific recipients.

So it's either a role for the resource (like Owner) or an individual BUT NO GROUPS !

I Agree

   upvoted 2 times

  **Kennxfc** 3 years, 6 months ago

Email will only be sent to Azure AD user members of the role. Email will not be sent to Azure AD groups or service principals.

You're very correct

   upvoted 8 times

  **Harry28731** 2 years, 10 months ago

Just try it !

From Azure Portal create an azure active directory security group.

From Azure Monitor create an action group and select either of the two.

The First won't let you specify a name of an AD Security Group, only roles

The Second forces you to add specific emails (individuals or generic) but NO AD Security Group.

So Second Answer is NO, and if MS says it's yes, then it should rewrite the question because the wording is misleading.

Answer is Y-N-Y

- <https://docs.microsoft.com/en-us/azure/azure-monitor/overview>

- <https://docs.microsoft.com/en-us/azure/azure-monitor/platform/action-groups>

- <https://docs.microsoft.com/en-us/azure/azure-monitor/platform/alerts-overview>

YNY is correct.

"No, Azure Monitor cannot directly send alerts to Azure Active Directory (AAD) security groups. However, you can configure Azure Monitor to send alerts to action groups, which can include email addresses, SMS, push notifications, and other options. If you want to notify members of an AAD security group, you would need to add the individual email addresses of

actions12. If you want to notify members of an AAD security group, you would need to add the individual email addresses of the group members to the action group."

So read Salilgens top comment and the rest. This is correct.

I have been looking at various docs and watched some videos, I think you can't send a mail to a security group but rather to a role. This is configured under Action Groups. That's another one of those questions where a point won't be gained.

Yes. Azure Monitor can monitor the performance of on-premises computers using Log Analytics agent.

No. Azure Monitor alerts are not sent to Azure Active Directory (AAD) security groups. They are typically sent via email, SMS, push notification, or ITSM tools.

Yes. Azure Monitor can trigger alerts based on data in Azure Log Analytics workspace.

Appeared in my test 10/30/23 I answered Y-Y-Y. Not sure about it. Final Score was 895 "describe Azure management" was 81% and "describe Azure arch" was 92%

   upvoted 3 times

  **ziggy1117** 1 year, 8 months ago

#2 YES. Active Groups... so the security group stated can be the action group

   upvoted 2 times

  **Pinha** 1 year, 9 months ago

All of the statements are correct.

Azure Monitor can monitor the performance of on-premises computers. You can use Azure Monitor to monitor the performance and availability of your on-premises servers, as well as the performance of your applications and services running on those servers. This can help you identify and troubleshoot issues, and ensure that your on-premises systems are running smoothly.

Azure Monitor can send alerts to Azure Active Directory security groups. You can configure Azure Monitor to send alerts to one or more Azure AD security groups when certain conditions are met. This can help you ensure that the right people are notified when there are issues with your systems.

Azure Monitor can trigger alerts based on data in an Azure Log Analytics workspace. You can use Azure Monitor to set up alerts that are triggered when specific data is logged to an Azure Log Analytics workspace. This can help you identify issues and trends in your data, and take appropriate action in response.

  **anpiyush2008** 1 year, 6 months ago

No There is nothing mentioned about alerts sent to AD group

   upvoted 1 times

  **ChloeOlivia** 2 years ago

2nd one is Y. In the setting, you can specify email address.

It can be an email address of a mail-enabled security group, therefore Yes.

  **cormorant** 2 years, 7 months ago

In addition to monitoring your on-prems, Azure Mon can both send and trigger alerts

   upvoted 1 times

  **Meyti** 2 years, 7 months ago

Y.N.Y

.....

Send email to the members of the subscription's role. Email will only be sent to Azure AD user members of the role. Email won't be sent to Azure AD groups or service principals.
A notification email is sent only to the primary email address.
