EXAM AZ-900 TOPIC 1 QUESTION 109 DISCUSSION

Actual exam question from Microsoft's AZ-900

Question #: 109

Topic #: 1

[\[All AZ-900 Questions\]](#)

HOTSPOT -

You plan to create an Azure virtual machine.

You need to identify which storage service must be used to store the unmanaged data disks of the virtual machine.

What should you identify? To answer, select the appropriate service in the answer area.

Hot Area:

Answer Area

Containers

Scalable, cost-effective storage for unstructured data

[Learn more](#)

File shares

Serverless SMB file shares

[Learn more](#)

Tables

Tabular data storage

[Learn more](#)

Queues

Effectively scale apps according to traffic

Unmanaged disks are VHD files that are stored as page blobs in Azure storage accounts. The page blobs created by tenants are referred to as VM disks and are stored in containers in the storage accounts.

Answer Container service is correct. To store the unmanaged data disks of an Azure virtual machine, one should use Azure Blob Storage within the Containers service. Azure Blob Storage within the Containers service is designed for storing large amounts of unstructured data, such as virtual hard disks (VHDs) used by Azure virtual machines.

Unmanaged disks are VHD files that are stored as page blobs in storage containers in Azure Stack storage accounts. The page blobs created by tenants are referred to as VM disks and are stored in containers in the storage accounts. We recommend you use unmanaged disks only for VMs that need to be compatible with third-party tools, which only support Azure unmanaged disks.
