**Selected Answer: B**

It's B: Azure Application Insights is a feature of Azure Monitor that allows to monitor running applications, automatically detect performance anomalies, and use built-in analytics tools to see what users do on an app.

The correct answer should be "B" because: Network Watcher enables you to monitor and repair the network health of IaaS products like virtual machines (VMs), virtual networks (VNETs), application gateways, load balancers, etc. Network Watcher isn't designed or intended for PaaS monitoring or Web analytics.
