Had that question on (26.02.23). The following questions were included and even a mixture of them. I may repeat a question, but they are repeated here as well. Good luck all

but they are repeated here as well. Good luck all.

**Selected Answer: AD**

The correct answers are:

A. enables the rapid provisioning of resources

D. shifts capital expenditures (CAPEX) to operating expenditures (OPEX)

These are two key benefits of cloud computing. Cloud computing allows for the quick and efficient provisioning of resources, which can be scaled up or down as needed. It also shifts the financial model from capital expenditures (CAPEX), which are typically large, upfront investments in hardware and infrastructure, to operating expenditures (OPEX), which are ongoing costs for services and usage.

"shifts capital expenditures (CAPEX) to operating expenditures (OPEX)" is benefit? Because of tax problem or something?

   upvoted 2 times

  **Stasheck** 2 years ago

**Selected Answer: AD**

It lessens, not increases the admin overhead. It presents vast more options than on-prem.
