EXAM AZ-900 TOPIC 1 QUESTION 270 DISCUSSION

Actual exam question from Microsoft's AZ-900

Question #: 270

Topic #: 1

[\[All AZ-900 Questions\]](#)

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements

Yes

No

To implement an Azure Multi-Factor Authentication (MFA) solution, you must sync on-premises identities to the cloud.

☐☐

Two valid methods for Azure Multi-Factor Authentication (MFA) are picture identification and a passport number.

☐☐

Azure Multi-Factor Authentication (MFA) can be required for administrative and non-administrative user accounts.

☐☐

1st question is kinda confusing, Microsoft MUST address it. It can be YES and NO
   upvoted 27 times

it makes it sound like "IF there are any on-premise _____, they must be synced..."
   upvoted 3 times
-   **MaximeHU** 3 years, 5 months ago
indeed

The catch is a "must" word used in the question. It is not mandatory to have On-Prem identities to sync for multifactor auth.
   upvoted 23 times
-   **Seikolipa** 1 year, 8 months ago
Yes but the question's wording assumes the on premise environment already exists while you are trying to roll out MFA, therefore on prem identities would need to be synced to Azure before MFA could be deployed

NNY < No, it is not strictly necessary to sync on-premises identities to the cloud to implement Azure Multi-Factor Authentication (MFA). Azure MFA can be used with cloud-only identities in Azure Active Directory (Azure AD) without requiring synchronization of on-premises identities.

<https://learn.microsoft.com/en-us/azure/active-directory/authentication/concept-mfa-howitworks#available-verification-methods>
The following additional forms of verification can be used with Azure AD Multi-Factor Authentication:
- Microsoft Authenticator app
- Windows Hello for Business
- FIDO2 security key
- OATH hardware token (preview)
- OATH software token
- SMS
- Voice call

NNY

If you have on-premises users that you want to use Azure MFA with, you have a few options:

Sync your on-premises identities to Azure AD using Azure AD Connect. This will allow you to manage your on-premises and cloud-based users in a single place and use Azure MFA with both types of users.

Use Azure AD Domain Services to provide your on-premises users with cloud-based authentication services. This will allow you to use Azure MFA with your on-premises users without the need to sync their identities to the cloud.

Use a third-party MFA solution that can integrate with your on-premises environment. This will allow you to use Azure MFA with your on-premises users without the need to sync their identities to the cloud.

In summary, it is not necessary to sync on-premises identities to the cloud in order to implement an Azure MFA solution, but it may be necessary if you want to use Azure MFA with on-premises users.

confusing question, see below explanation of authentication: Multi-factor Authentication (MFA)

Process of authentication using more than one factor (evidence) to prove identity

Factor types

Knowledge Factor – “Something you know”, ex. password, pin

Possession Factor – “Something you have”, ex. phone, token, card, key

Physical Characteristic Factor – “Something you are”, ex. fingerprint, voice, face, eye iris

Location Factor – “Somewhere you are”, ex. GPS location

  **dr_benzin** 2 years, 11 months ago

WTF!? If you have on-prem - you should sync AD, if you have no on-prem - the first question has no sense.
