It seems certificates and Azure key vault is not in the most recent AZ-900 scope list. Can someone confirm this question will not appear in AZ-900 exam anymore?

Azure Key Vault is an Azure service that provides secure storage for secrets, such as passwords, certificates, and keys. It allows you to store, manage, and rotate secrets in a secure, centralized location, and helps you to control access to them using Azure Active Directory (AD) and RBAC.

zure Key Vault is a cloud service for securely storing and accessing secrets. A secret is anything that you want to tightly control access to, such as API keys, passwords, certificates, or cryptographic keys. Key Vault service supports two types of containers: vaults and managed hardware security module(HSM) pools.

Answer is C
