The correct answer seems to be Spot Virtual Machines but can someone please tell me where the heck this can be found in the Learning Paths that should supposedly be sufficient as preparation for the exam??

This goes for about 40% of the questions here BTW ... I don't get it.

Yes I remember this one from the AZ-900 exam ref. But you're right, so many topics I don't even recognize.

"Azure Spot VM instances" is the answer.

<https://learn.microsoft.com/en-us/azure/virtual-machines/spot-vms>

Using Azure Spot Virtual Machines allows you to take advantage of our unused capacity at a significant cost savings. At any point in time when Azure needs the capacity back, the Azure infrastructure will evict Azure Spot Virtual Machines. Therefore, Azure Spot Virtual Machines are great for workloads that can handle interruptions like batch processing jobs, dev/test environments, large compute workloads, and more.
