Memorise:

azure synapse analytics = Warehouse

Azure cosmos = even larger than the globe (global) : cosmos

Azure HDInsight = HaDooP

Azure synapse analytics used to be called Azure SQL Data Warehouse

<https://azure.microsoft.com/en-us/blog/azure-sql-data-warehouse-is-now-azure-synapse-analytics/>

Azure cosmos is the only database that supports NoSQL.

Azure Synapse Analytics is designed for processing and analyzing structured data, Azure HDInsight is designed for processing and analyzing unstructured or semi-structured data, and Azure Cosmos DB is designed for storing and accessing large amounts of globally-distributed data.

Hopes this help.
