EXAM AZ-900 TOPIC 1 QUESTION 112 DISCUSSION

Actual exam question from Microsoft's AZ-900

Question #: 112

Topic #: 1

[\[All AZ-900 Questions\]](#)

HOTSPOT -

You plan to implement an Azure database solution.

You need to implement a database solution that meets the following requirements:

- Can add data concurrently from multiple regions
- Can store JSON documents

Which database service should you deploy? To answer, select the appropriate service in the answer area.

Hot Area:

DATABASES (16)

Azure Cosmos DB ★	SQL databases ★
Azure Database for MySQL servers ★	Azure Database for PostgreSQL servers ★
Azure Database for MariaDB servers ★	SQL servers ★
SQL Data warehouses ★	Azure Database Migration Services ★
Azure Cache for Redis ★	SQL Server stretch databases ★
Data factories ★	SQL elastic pools ★
Virtual Clusters ★	Managed databases ★
Elastic Job agents ★	SQL managed instances ★

And what will be the answer if there will be no "multiple region" key?

   upvoted 8 times

  **zimzimzimma** 1 year, 4 months ago

In that case there will be more than one answer I think, since 'can store json documents' can be interpreted as 'can store strings'. ANY db can store strings.

Agree, Cosmos DB is the answer ("multi-region" is the key as stated above)

answer is correct, COSMOS DB

   upvoted 2 times

  **rafacop** 1 year, 6 months ago

Keyword here "multiple region"

   upvoted 1 times

  **Pinha** 1 year, 9 months ago

You should deploy Azure Cosmos DB to meet the requirements of adding data concurrently from multiple regions and storing JSON documents.

One of the key features of Azure Cosmos DB is its ability to scale horizontally across multiple regions, enabling you to add data concurrently from multiple regions and to serve low-latency, globally distributed workloads. It also supports native JSON storage and querying, allowing you to store and retrieve JSON documents in the database.
