The answer clearly is HYBRID. There is a mix of "on-premises" and "cloud base" resources.

Selected Answer: A

In general, on-prem is not the same as private cloud - as per MS, you can actually have private cloud deployed from some other vendor datacenter (not necessarily "on-prem" per se). However, in many questions regarding hybrid model "on-prem"+"public cloud" = hybrid, on-prem is not "cloud" per se, but it's private, and private + public cloud => hybrid.

I am always confused ...

1. Question said "Which cloud computing model ...", it means that answer [A. hybrid] is [hybrid cloud computing model].
2. Question said "... includes on-premises & cloud-based resources", then it means [on-premises] is not cloud service.
Therefore, "hybrid cloud = [On-premises (not cloud)] + [cloud-based resources (cloud)]" is right? I don't think so, on-premise is not cloud.

I think [on-premise] & [private cloud] are different, but this question deals both as same thing. Which point am I making a misunderstanding?

Short answer, yes you are misunderstanding.
