Azure Information Protection (sometimes referred to as AIP) is a cloud-based solution that helps an organization to classify and optionally, protect its documents and emails by applying labels. Labels can be applied automatically by administrators who define rules and conditions, manually by users, or a combination where users are given recommendations.

**Selected Answer: B**

B is the answer.

Azure Information Protection (AIP) is a cloud-based solution that allows you to classify and protect your sensitive documents and email messages. It uses Azure Active Directory to authenticate users, and it uses Azure Rights Management to encrypt and control access to the protected documents. The encryption used in AIP is based on Azure Rights Management (Azure RMS), which uses encryption, identity, and authorization policies to help secure files and email, both in transit and when at rest.

I am studying for the exam from the Microsoft Learning path: <https://docs.microsoft.com/en-us/learn/paths/az-900-describe-cloud-concepts/>

I did not come across this topic in the materials there. This is not a singular case...quire infuriating.
