Hi all, I took AZ-900 exam Friday 12 July 2024 and many questions are similar to the questions here. Overall the exam was easy to take, much easier than AWS

I believe the indicated answer is correct.  
The first answer, which might seem correct, is certainly wrong because "Only the Owner and the User Access Administrator built-in roles can create and delete management locks" (<https://learn.microsoft.com/en-us/azure/azure-resource-manager/management/lock-resources?tabs=json#who-can-create-or-delete-locks>).  
Therefore the "Global Administrator" has NO power to delete the resource.  
The latter (the Global Administrator) could delete the resource only if FIRST "elevate your access" to "User Access Administrator" ([https://learn.microsoft.com/en-us/azure/role-based-access-control /elevate-access-global-admin#how-does-elevated-access-work](https://learn.microsoft.com/en-us/azure/role-based-access-control/elevate-access-global-admin#how-does-elevated-access-work)).  
But nothing tells us that this operation was implemented by the Global Administrator.  
So the answer appears to be correct.
