EXAM AZ-900 TOPIC 1 QUESTION 18 DISCUSSION

Actual exam question from Microsoft's AZ-900

Question #: 18

Topic #: 1

[\[All AZ-900 Questions\]](#)

Note: The question is included in a number of questions that depicts the identical set-up. However, every question has a distinctive result. Establish if the solution satisfies the requirements.

Your company's infrastructure includes a number of business units that each need a large number of various Azure resources for everyday operation.

The resources required by each business unit are identical.

You are required to sanction a strategy to create Azure resources automatically.

Solution: You recommend that the Azure Resource Manager templates be included in the strategy.

Does the solution meet the goal?

A. Yes

B. No

Answer seems correct.

<https://docs.microsoft.com/en-us/azure/azure-resource-manager/templates/overview>

To meet these challenges, you can automate deployments and use the practice of infrastructure as code. In code, you define the infrastructure that needs to be deployed. The infrastructure code becomes part of your project. Just like application code, you store the infrastructure code in a source repository and version it. Any one on your team can run the code and deploy similar environments.

A is the correct answer. Azure Resource Manager templates are JavaScript Object Notation (JSON) files that define the infrastructure and configuration for your project.

The answer is A. Yes

Using Azure Resource Manager (ARM) templates is a highly effective strategy for automatically creating and managing Azure resources, especially when you have identical requirements for multiple business units. ARM templates allow you to define your infrastructure as code, specifying the resources, configurations, and relationships in a declarative manner.

By creating ARM templates that represent the required resources, you can deploy them consistently across different business units while ensuring that the configurations are identical. This approach is efficient, repeatable, and scalable, making it a suitable solution for automating resource deployment.

Therefore, recommending the use of Azure Resource Manager templates in the strategy aligns with the goal of automatically creating Azure resources for each business unit.

yes,

We can use Azure Resource Manager templates to automate the creation of the Azure resources. Deploying resource through templates is known as Infrastructure as code. To implement infrastructure as code for Azure solutions, use Azure Resource Manager templates.
