EXAM AZ-900 TOPIC 1 QUESTION 323 DISCUSSION

Actual exam question from Microsoft's AZ-900

Question #: 323

Topic #: 1

[\[All AZ-900 Questions\]](#)

HOTSPOT -

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
With a consumption-based plan, you pay a fixed rate for all data sent to or from virtual machines hosted in the cloud.	<input type="radio"/>	<input type="radio"/>
With a consumption-based plan, you reduce overall costs by paying only for extra capacity when it is required.	<input type="radio"/>	<input type="radio"/>
Serverless computing is an example of a consumption-based plan.	<input type="radio"/>	<input type="radio"/>

"With a consumption-based plan, you reduce overall costs by paying only for extra capacity when it is required. "

<https://docs.microsoft.com/en-us/azure/architecture/framework/cost/design-price>

I am not sure of this: "Extra capacity". You pay for all capacity you use. Not just for any capacity in a consumption based plan.

So the answer should be B

I think they mean that in general you pay less by only having to pay for that extra capacity when needed. That is how I read it. But I see your point, I just think you are overthinking it.

i though they were playing with words by saying when you need extra capacity you pay for it

N Y Y is correct. Read it as "additional" capacity. You reduce overall cost by paying only for additional capacity when it's required.

I agree with No, Yes, Yes but not for the argument given for the first question. It should be No, because a consumption Plan has nothing to do with data being send and retrieved from VM's, but rather it has to do with the execution time of (serverless) functions. Note that you still pay a price from data being send from storage, but thats not part of the 'consumption plan'.

Source: <https://docs.microsoft.com/en-us/azure/azure-functions/consumption-plan>

I am still wondering: Since the consumption plan only charges us for the time the VMs is running. It has nothing to do with whether data is sent or not to the VMs. Doesn't that mean that the rate we are charged is fixed since fee is only dependent on the running time

Consumption-based - You are billed for only what you use

Example: Azure Functions - You pay for no of invocations!

I initially thought Y N Y is the answer.. But here the keyword is 'fixed rate'.

1. So for consumption based plan, no fixed rate - N
2. extra capacity only when its required. no fixed rate - Y
3. Y

SOLUTION: NO YES YES

CONSUMPTION MODEL: Users only pay for the resources that they use, no up-front costs. No need to purchase/manage costly infrastructure that not use fullest.

Ability to pay/stop paying for additional resources when needed.

No fixed rate for all data sends because resources are metered/billed according they consume.

SERVERLES COMPUTING: Highly scalable/event-driven, only resources when a specific function or trigger occurs.

upvoted 4 times

Huawei_55 3 years, 5 months ago

Azure consumption based model is pay-as-you-go - You don't pay for data from on premises to Azure cloud ,but you only pay when that data is moved from azure to your data centre
