"Azure Security Center" is the answer, and it has been renamed to Microsoft Defender for Cloud.

<https://learn.microsoft.com/en-us/azure/defender-for-cloud/just-in-time-access-usage>
You can use Microsoft Defender for Cloud's just-in-time (JIT) access to protect your Azure virtual machines (VMs) from unauthorized network access. Many times firewalls contain allow rules that leave your VMs vulnerable to attack. JIT lets you allow access to your VMs only when the access is needed, on the ports needed, and for the period of time needed.

congrats! Thats a great score. May i ask you if you have used other resources than examtopics to prep for exam?
Examtopics is super helpful - i used it a lot for DP-900 exam and passed. I would also like to broaden my chances if there is smth else out there... Thank you in advance!

-  **Meyti** 2 years, 7 months ago
D is correct.
"Azure Security Center and Azure Defender are now called Microsoft Defender for Cloud."

"Azure Security Center and Azure Defender are now called Microsoft Defender for Cloud."

"Enable JIT on your VMs - You can enable JIT with your own custom options for one or more VMs using Defender for Cloud, PowerShell, or the REST API. Alternatively, you can enable JIT with default, hard-coded parameters, from Azure virtual machines. When enabled, JIT locks down inbound traffic to your Azure VMs by creating a rule in your network security group."

FYI Azure Security Center and Azure Defender are now called Microsoft Defender for Cloud. We've also renamed Azure Defender plans to Microsoft Defender plans. For example, Azure Defender for Storage is now Microsoft Defender for Storage. Learn more about the recent renaming of Microsoft security services.
