EXAM AZ-900 TOPIC 1 QUESTION 386 DISCUSSION

Actual exam question from Microsoft's AZ-900

Question #: 386

Topic #: 1

[All AZ-900 Questions]

DRAG DROP

-

Match the cloud computing benefits to the appropriate requirements.

To answer, drag the appropriate benefit from the column on the left to its requirement on the right. Each benefit may be used once, more than once, or not at all.

NOTE: Each correct match is worth one point.

Benefits	Answer Area	
Disaster recovery	Benefit	Provide a continuous user experience in the event of a
Geo-distribution		resource failure.
High availability	Benefit	Deploy apps and data to regional data centers that are located close to users.
Scalability	Benefit	Compute capacity can be increased dynamically by adding RAM or CPU to a virtual machine.

Was in exam today.

Just a difference was the option with Geo-redudncy

High Availability (HA) and Disaster Recovery (DR) serve different purposes in a system's architecture, although they both contribute to the system's overall reliability.

High Availability is about ensuring that a system remains operational and accessible as much as possible, even in the event of a failure of part of the system. This is achieved through redundancy and failover mechanisms. If a component fails, the system can automatically switch to a backup component. This provides a continuous user experience, which is what the question is asking for.

Disaster Recovery, on the other hand, is about restoring a system after a major incident or disaster that causes a significant system outage. This could involve restoring from backups, switching to a disaster recovery site, etc. This process may not be immediate and could result in some downtime.

So, in the context of providing a continuous user experience in the event of a resource failure, High Availability is the correct answer.

answer is correct

keyword is provide continu so thats HA

disaster recovery is by failure recovering data, vm etc..

https://learn.microsoft.com/en-us/training/modules/describe-benefits-use-cloud-services/2-high-availability-scalability-cloud

High availability

When you're deploying an application, a service, or any IT resources, it's important the resources are available when needed. High availability focuses on ensuring maximum availability, regardless of disruptions or events that may occur.

Scalability

Another major benefit of cloud computing is the scalability of cloud resources. Scalability refers to the ability to adjust resources to meet demand. If you suddenly experience peak traffic and your systems are overwhelmed, the ability to scale means you can add more resources to better handle the increased demand.

No, because there is some time between the failure and when everything is recovered. It is not continuous.
