NYY

Yes, you can add multiple resource locks to the same Azure virtual machine. Resource locks in Azure help prevent accidental deletion or modification of your resources. There are two types of locks you can apply:

ReadOnly: This lock allows read-only access to the resource. Users can read the resource but cannot delete or update it. CanNotDelete: This lock allows all operations except delete. Users can read and modify the resource but cannot delete it. By applying multiple locks, you can ensure different levels of protection based on your needs. If you have any specific scenarios or questions about using resource locks, feel free to ask!

NNY
You can apply one of each lock type (Read-Only and Delete) to a single virtual machine, but you cannot apply multiple locks of the same type. The lock will apply across the resource and cannot be overridden by user permissions or roles unless the lock is explicitly removed
