Honestly, I cannot find any material on Sentinel on the learning syllabus, anybody seen it recently in the AZ-900 exams?

"automatically respond to threats" is the answer.

https://learn.microsoft.com/en-us/azure/sentinel/automate-responses-with-playbooks#what-is-a-playbook
A playbook is a collection of these remediation actions that can be run from Microsoft Sentinel as a routine. A playbook can help automate and orchestrate your threat response; it can be run manually on-demand on entities (in preview - see below) and alerts, or set to run automatically in response to specific alerts or incidents, when triggered by an automation rule.

For example, if an account and machine are compromised, a playbook can isolate the machine from the network and block the account by the time the SOC team is notified of the incident.
