Selected Answer: B

B is the answer.

https://learn.microsoft.com/en-us/azure/virtual-desktop/rbac
Azure Virtual Desktop uses Azure role-based access control (RBAC) to control access to resources. There are a number of built-in roles for use with Azure Virtual Desktop which is a collection of permissions. You assign roles to users and admins and these roles give permission to carry out certain tasks.

In Azure, you can use role-based access control (RBAC) to grant permissions to Azure Virtual Desktop resources. RBAC is a system that allows you to manage access to Azure resources based on roles.

In RBAC, you can define roles that represent a set of permissions, and then assign those roles to users or groups. For example, you can create a role that allows users to view and manage Azure Virtual Desktop resources, and then assign that role to a group of users who need to access those resources.
