I would say the answer is B because it is asking what an application should connect to retrieve a security token.

https://learn.microsoft.com/en-us/azure/key-vault/general/overview

Securely store secrets and keys
Access to a key vault requires proper authentication and authorization before a caller (user or application) can get access. Authentication establishes the identity of the caller, while authorization determines the operations that they're allowed to perform.

Authentication is done via Azure Active Directory.

https://learn.microsoft.com/en-us/azure/azure-government/documentation-government-welcome
US government agencies or their partners interested in cloud services that meet government security and compliance requirements, can be confident that Microsoft Azure Government provides world-class security and compliance. Azure Government delivers a dedicated cloud enabling government agencies and their partners to transform mission-critical workloads to the cloud. Azure Government services can accommodate data that is subject to various US government regulations and requirements.
