📄 **EXAM AZ-900 TOPIC 1 QUESTION 33 DISCUSSION**

Actual exam question from Microsoft's AZ-900
Question #: 33
Topic #: 1
[All AZ-900 Questions]

Note: The question is included in a number of questions that depicts the identical set-up. However, every question has a distinctive result. Establish if the solution satisfies the requirements.

Your company's Active Directory forest includes thousands of user accounts.

You have been informed that all network resources will be migrated to Azure. Thereafter, the on-premises data center will be retired.

You are required to employ a strategy that reduces the effect on users, once the planned migration has been completed.

Solution: You plan to require Azure Multi-Factor Authentication (MFA).

Does the solution meet the goal?

   A. Yes

   B. No

The main objective of Multi-Factor Authentication (MFA) is to enhance access security by introducing an additional verification layer beyond standard login credentials. To mitigate the impact on users after the planned migration, the plan is to synchronize all user accounts from Active Directory with Azure Active Directory (Azure AD). This allows users to use the same credentials to access both on-premises and cloud-based resources in Azure, ensuring a smoother and more transparent transition.

"You are required to employ a strategy that reduces the effect on users, once the planned migration has been completed.". Multi-factor authentication doesn't reduce the effect or have any kind of effect on this issue. MFA is used to verify the reinforce the security to identify a user, but it doesn't help at all in arranging the user's accounts

also enforcing MFA as a part of migration will only increase the "effect" on users

👍 ↩ 🚩 upvoted 23 times

⊟ 👤 **Rohit2023** 1 year, 9 months ago

correct!

AD Connect is a pre requisite for Azure MFA. so if we achieve that we have already synced to the azure ad.

👍 ↩ 🚩 upvoted 6 times

⊟ 👤 **Foow** 2 years, 9 months ago

Could you please post a doc reference for this? (That AD Connect is a pre-requisite for MFA)

No, Azure active directory will do that it seems.

👍 ↩ 🚩 upvoted 1 times

⊟ 👤 **realmadrid** 3 months, 2 weeks ago

can it not be Azure Migrate service?

👍 ↩ 🚩 upvoted 1 times

⊟ 👤 **Aly24** 4 months, 2 weeks ago

La risposta corretta è NO. L'obiettivo principale dell'autenticazione a più fattori (MFA) è migliorare la sicurezza degli accessi mediante l'introduzione di un ulteriore livello di verifica oltre alle credenziali di accesso standard.
Per ridurre l'effetto sugli utenti, una volta completata la migrazione pianificata, si prevede di sincronizzare tutti gli account utente di Active Directory con Azure Active Directory (Azure AD). Questo permette agli utenti di utilizzare le stesse credenziali per accedere alle risorse locali e a quelle basate su cloud in Azure, mantenendo una transizione più fluida e trasparente.

Selected Answer: B

chat GPT

👍 ↩ 🚩 upvoted 2 times

⊟ 👤 **SuryaPrakashBarik** 5 months, 2 weeks ago

According to Copilot the answer is A. Because the MFA will increase the security and identity of the user.

👍 ↩ 🚩 upvoted 1 times

⊟ 👤 **ShakeyP** 6 months ago

I thought the answer would be B.

👍 ↩ 🚩 upvoted 1 times

⊟ 👤 **Alonsochaves** 7 months ago

Selected Answer: A

I believe the answer is A because the key is when the migration is completed, MFA will help to verify the users identity and reduce the effects of the migration.
