📄 EXAM AZ-900 TOPIC 1 QUESTION 126 DISCUSSION

Actual exam question from Microsoft's AZ-900

Question #: 126

Topic #: 1

[All AZ-900 Questions]

HOTSPOT -

To complete the sentence, select the appropriate option in the answer area.

Hot Area:

Answer Area

| ▼ |
| The Azure Migrate: Server Assessment tool |
| The Azure Total Cost of Ownership (TCO) calculator |
| The Database Migration Assistant |
| The pricing calculator in Azure |

can calculate cost savings due to reduced electricity consumption as a result of migrating on-premises Microsoft SQL servers to Azure.

ArcRiseGen `Most Recent ⊙` **9 months ago**

Easiest way of remembering it for me is Total COmparison. It will compare what you have with what you can potentially save with Azure

👍 ↩ 🚩 **upvoted 2 times**

dayanandthombare **1 year ago**

The correct answer is The Azure Total Cost of Ownership (TCO) calculator.

The Azure Total Cost of Ownership (TCO) calculator is a free online tool that allows you to estimate the cost savings you can achieve by migrating your application workloads to Microsoft Azure. It helps you to evaluate potential cost savings if you migrate on-premises application workloads to Microsoft Azure by specifying the details of your existing infrastructure and various cost assumptions you want the tool to work with. You can then receive a report that shows on-premises costs compared to Microsoft Azure costs.

Here are the reasons why the other options are incorrect:
The pricing calculator in Azure: It is an online tool that provides estimates of the cost of Azure products and services 5. While it can help you estimate the costs for Azure products and services, it is not specifically designed to calculate cost savings due to reduced electricity consumption as a result of migrating on-premises Microsoft SQL servers to Azure.

The Azure Migrate: Discovery and assessment tool discovers and assesses on-premises VMware VMs, Hyper-V VMs, and physical servers for migration to Azure. Here's what the tool does: Azure readiness: Assesses whether on-premises servers, SQL Servers and web apps are ready for migration to Azure.

Total cost of ownership - (TCO) is an estimation of the expenses associated with purchasing, deploying, using and retiring a product or piece of equipment.

The Data Migration Assistant - (DMA) helps you upgrade to a modern data platform by detecting compatibility issues that can impact database functionality in your new version of SQL Server or Azure SQL Database.

Azure Pricing Calculator - It is a tool provided by Microsoft that allows users to estimate the cost of using Azure services. It allows users to select the services they plan to use, specify the configuration and usage details, and then calculate the estimated cost based on the current prices for those services.
