Azure Service Health --> Correct

upvoted 19 times

daloslav `Highly Voted` 9 months ago

Azure Service Health should be correct answer, because:
Azure Status = status of Azure globally
Azure Service Health = View of Azure services and regions you are using [services and regions keywords!]
Resource Health = Tailored view of your actual Azure resources

upvoted 9 times

Alsari `Most Recent` 3 weeks ago

Azure status provides you with a global view of the health of Azure services and regions.

JC0708 1 month, 3 weeks ago

After watch an video comparing of the Azure Status page, Azure Service Health, and Azure Resource Health , I would think the answer is Azure Status would be more suitable as the question doesn't mention globally or your Azure resources. https://learn.microsoft.com/en-us/azure/service-health/overview

126e81f 2 months ago

Given that the question is simply about providing a health overview of Azure services and regions without specifying personalization, Azure Status would be a suitable choice.

Azure service health is correct

upvoted 1 times

NoursBear 2 months, 3 weeks ago

The question does not stipulate "YOUR AZURE SERVICES" so Azure status could be correct. I'll have to think what I will chose if I get this

upvoted 2 times

NoursBear 2 months, 3 weeks ago

It even says
"Azure status provides you with a global view of the health of Azure services and regions"
on the doc mentioned below here.
Going for Azure status

It's definitely Azure status, as the keyword here is "overview of Azure services and regions".

above link has this below ,
The Azure status page, however, doesn't show all information about the health of your Azure services and regions. The status page isn't personalized, so you need to know exactly which services and regions you're using and locate them in the grid. The status page also doesn't include information about non-outage events that could affect your availability. For example, planned maintenance events and health advisories (think service retirements and misconfigurations). Finally, the status page doesn't have a means of notifying you automatically in the event of an outage or a planned maintenance window that might affect you.

For all of these use cases, we created Azure Service Health.
